

B2BinPay Launches A Brand-New v17 Upgrade – A New Horizon In Crypto Payment Services

The B2BinPay firm is pleased to announce the release of B2BinPay v17, an upgraded version specifically designed to enhance the user's experience when making payments using digital assets. As a leading cryptocurrency platform, [B2BinPay](#) allows merchants and businesses to conduct international cryptocurrency transactions seamlessly. As a result of B2BinPay's easy-to-integrate technology, companies can interact with the growing market for digital currencies in a straightforward manner.

To suit the various demands of merchant and enterprise clients, this new edition expands upon the company's current capabilities and adds a number of additions, upgrades, and adjustments.

Using EUROCC and TUSD As a New Option for Settlement

During a period of high volatility in the cryptocurrency market, stablecoins offer a measure of predictability and security. B2BinPay previously offered merchant clients the ability to settle payments in five different currencies: Bitcoin, USDT, USDC, USD and EUR.

As part of the v17 update, TrueUSD and Euro Coin have been added to the Merchant Wallets to provide merchants with more stable transaction options. As a result, merchants now have more comprehensive

settlement opportunities, offering them a total of 14 coins, 14 stablecoins, and 25 tokens that could be resolved automatically into seven currencies. These new additions offer merchants greater flexibility in managing client payments as they are compatible with multiple token standards, particularly ERC20, BEP20, and TRC20.

For B2BinPay, broadening its settlement options with Euro Coin is especially exciting. The company Circle, which also produces USDC (market valuation over \$25B), the second-largest stablecoin after USDT, has launched EUROCC, a stablecoin backed by Euro. EUROCC, one of the top 18 stablecoins, is incredibly efficient for businesses that operate in the European region.

Additional Currencies for Enterprise Customers

With the B2BinPay enterprise blockchain wallet solution, businesses can receive and hold cryptos in the same cryptocurrency they receive, providing a comprehensive ecosystem for corporate institutions that want to do business exclusively with cryptocurrencies.

B2BinPay's v17 version significantly improves [token support](#) for enterprise clients by enabling **14 stablecoins and 113 new tokens** across 14 different blockchain networks, including Ethereum, TRON, Binance Smart Chain, and others.

Enhanced Price Model

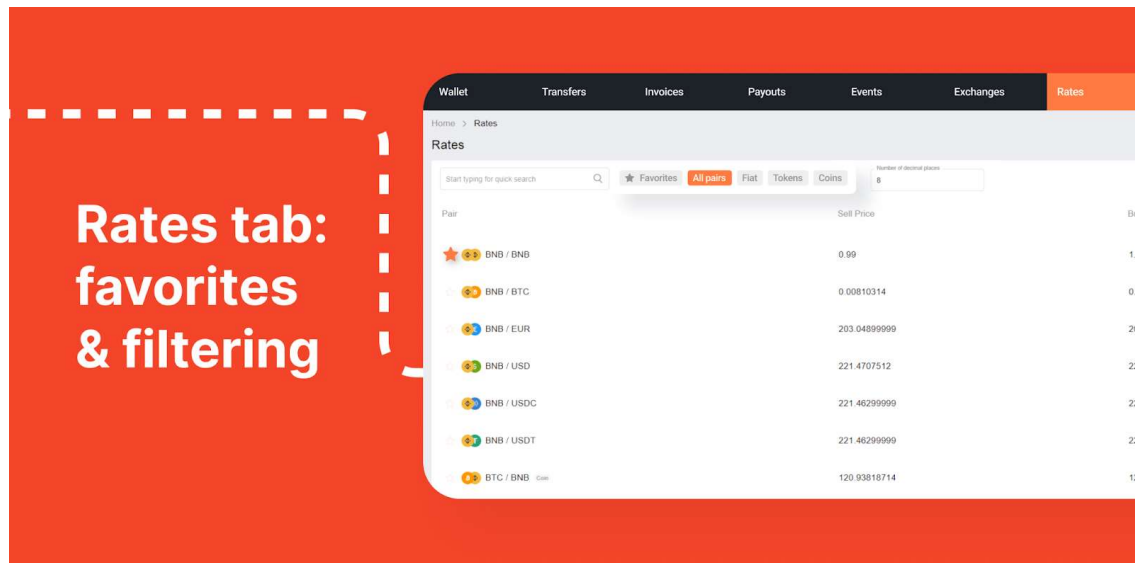

<

Also included in version 17 is a new and more competitive [price module](#) for users of the organisation.

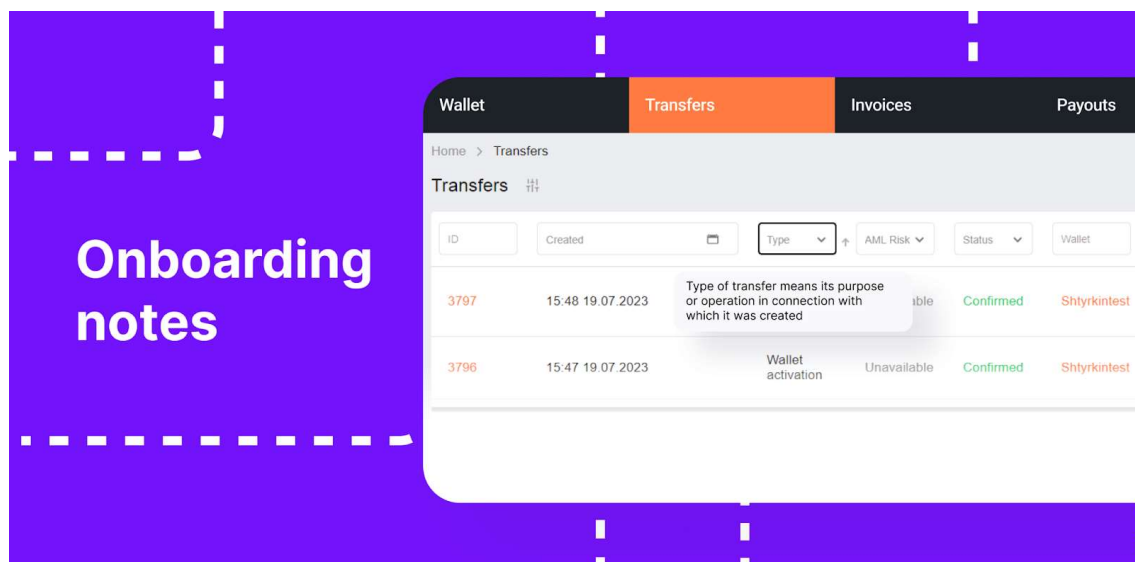

As a result, merchant setup fees have been reduced to \$500, and commission rates have also dropped from 0.5% to 0.4%. A new commission tier, starting at 0.25%, is being introduced for higher volume transactions, providing more cost-effective solutions.

There has been a reduction in the setup fee for Enterprise blockchain wallets from \$1500 to \$1000. The price is now extended to activating Ripple, Stellar, and Binance Coin wallets and smart contracts for Ethereum, Binance Smart Chain, and TRON. In essence, no additional activation fees are buried in the setup cost. Additionally, commission costs begin at 0.4% and go down to 0.05%, making corporate solutions even more competitive.

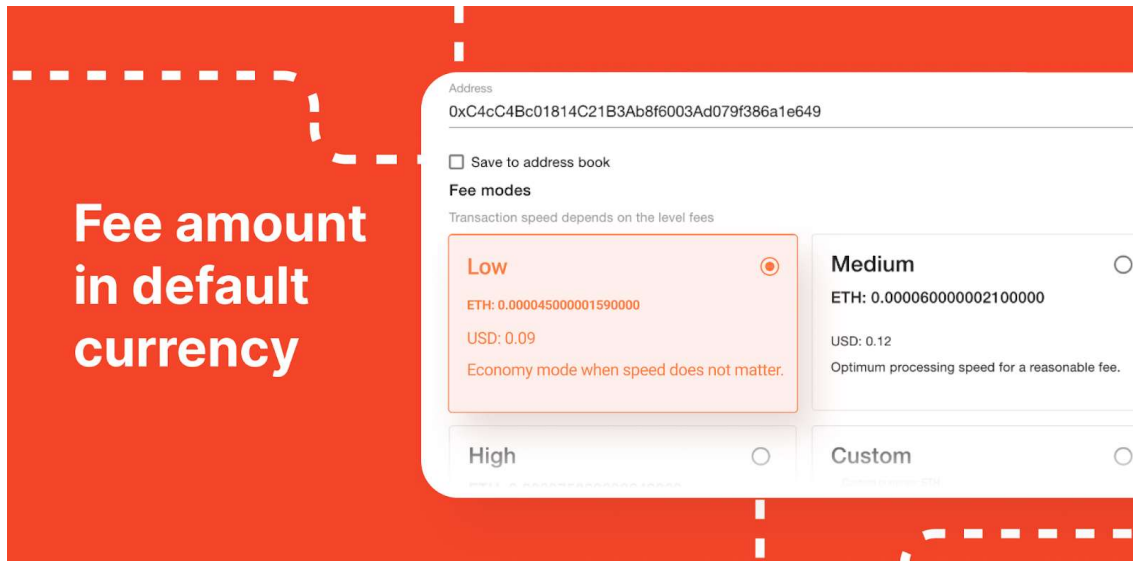

User Experience and Interface Improving

A new alphabetical search option, a favourites section, and additional filtering options based on currency types are now available in the Rates Tab. Your navigation and decision-making processes will be made easier by these modifications. To make it simpler for new and seasoned users to use the platform, the business has added comprehensive onboarding notes that give guided tours and explanations.

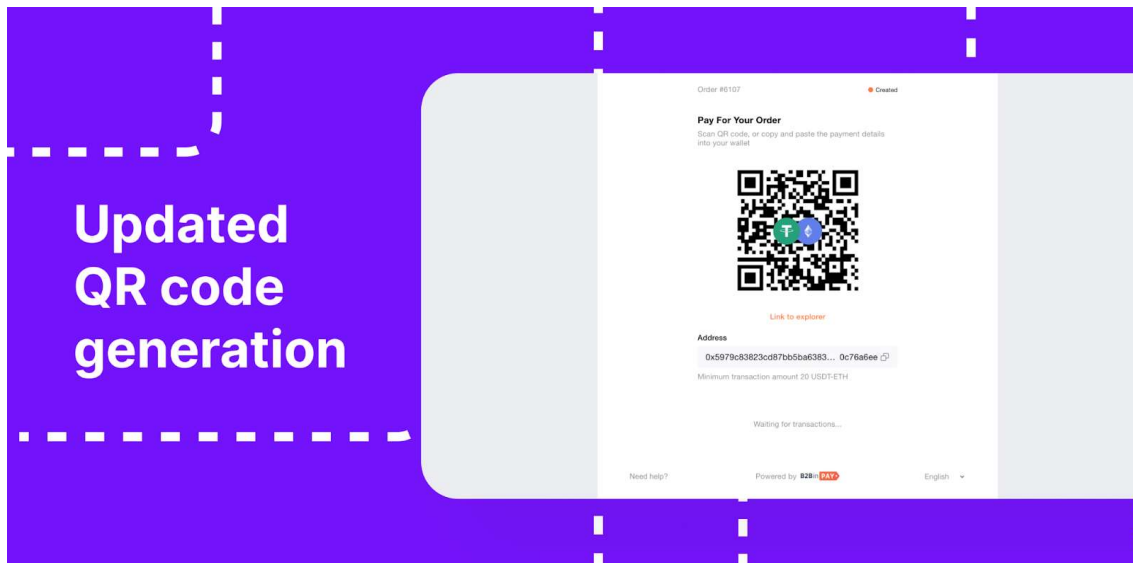

Additionally, payout fees can now be displayed in your default currency, and you can enter custom fee amounts, increasing transparency around transaction costs.

Enhancements to The User Interface and Functionalities

To develop the usability and efficiency of the platform, the firm has implemented several changes. These improvements to dropdown menus include grouping by currency type, active status, and search functionality, among other things. Additionally, the merchant invoice's 7-day expiration limit was eliminated, and reports now include an email notice function. A new "Delete Wallet" option enables users to delete wallets with no balance or deposits to manage them more effectively.

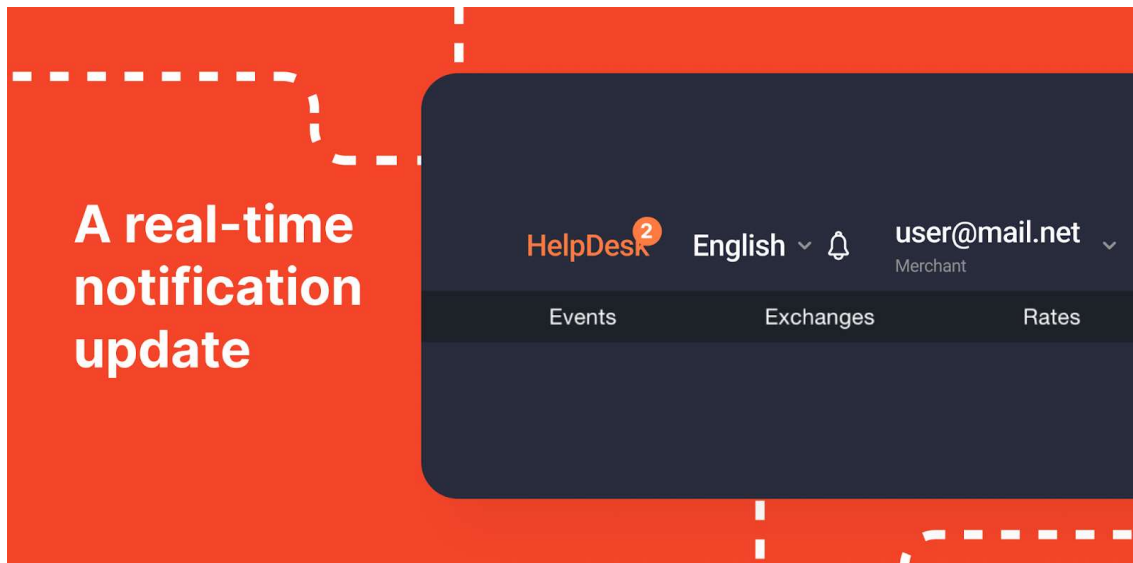

Enterprise users can now sort wallet tables by ID and currency. Additionally, there was updated QR code generation to include token icons as a new layer above the QR code, and each IP in the IP-whitelist can now be added or removed individually, with password confirmation appearing in a modal window.

Wallet tables may now be sorted by currency and ID for enterprise users. Each IP in the IP whitelist may now be added or withdrawn separately, with password confirmation showing in a modal window. Additionally, the creation of QR codes has been upgraded to incorporate token icons as a new layer above the QR code.

Customer Service and Device-Wide Consistency

There has been an enhancement to the Helpdesk that includes a real-time notification system, along with an unread counter that indicates the number of tickets that contain new messages. Consequently, you will be informed promptly when new messages are received in your support tickets.

Verdict

A comprehensive overhaul, B2BinPay v17 seeks to improve user experience for both individual and business customers. Versions 18 and 19 of the platform, which promise to provide further enhancements and new features to continue addressing the changing demands of the broad user base, are already in the development phases.

Ledger and the B2BiniPay company recently teamed together to create limited-edition, custom-branded [Ledger](#) Nano X wallets for the company's long-time and new clients, further demonstrating the dedication to innovation. In addition, B2BinPay will serve as the Athletic Club's [official sponsor](#) throughout the 2023–2024 La Liga season, increasing its visibility and promoting cryptocurrency payment options.

Such efforts, together with the release of version 17, showcase the company's dedication to innovation and the satisfaction of its customers.
